

# STR-101 Simultaneous TS Recorder

Receives digital terrestrial waves and records TS data.

Programs can be viewed via networked PC.

Top: Screen to preprogram parameters  
Left: Screen to find TS data (programs)

The STR-101 Simultaneous TS Recorder is a device to record programs (TS data) of terrestrial digital broadcasting automatically.

Programs in the resolution of 20Mbps can be recorded in the integrated 24TB HDD for more than 90 days.

- ◆ Necessary program files can be viewed with file names or broadcasted time instantly.
- ◆ Recorded programs can be viewed with video editor or video viewer software.
- ◆ Datacast can also be viewed with an optional viewer tool.
- ◆ The 1U rack-mountable chassis saves big space.

## FAQ

- Q1 How can programs be recorded with the device?  
⇒ Just connect the STR-101 to RF terminal on the OFDM modulator and a networked PC.
- Q2 How does it delete old programs when capacities are full?  
⇒ When capacities or recording days reach preprogrammed values, the STR-101 deletes old programs.
- Q3 What is the resolution (bit rate) to record programs?  
⇒ The STR-101 records programs at the same bit rate as that of broadcast waves.
- Q4 Tell me how to find recorded programs.  
⇒ Programs can be found by entering file name (program title) or broadcasted time with the special STR software or the "Explorer" installed in a PC.
- Q5 Can it also record multiplexed channels?  
⇒ Yes. All the multiplexed channels can be recorded in the TS file format.
- Q6 Is it necessary to connect it to a radio clock?  
⇒ When the STR-101 can receive TOT, the connection is not needed.
- Q7 Any counter-measure against troubles?  
⇒ Power supplies can be duplicated. RAID5 can be constructed with hard disks.
- Q8 Can it record datacasting?  
⇒ Yes. Datacasting will also be recorded in the form of TS files. The files can be viewed with the TVT-101, an optional viewing tool.
- Q9 How can datacast be viewed.  
⇒ Just connect the TVT-101 to the RF connector on a television set.
- Q10 What about the community channel broadcasted via STB?  
⇒ STR-201, a recording system for 64QAM, is optionally available.
